[Admin]

"As the admin I want to be able to have a form that gives me the ability to easily track room attributes for different rooms and their displays. With this form we can check various aspects including things like lamp usage, projector runtimes, and overall room usage. "

The administration from IT can use this form and database to make the classroom check easier by having one place to store all information about the room and its usage, to easier track when components are nearing their end of life cycle.

[Normal Users/ITS student workers]

"As a student this form will help me be able to check and see if there are any issues with any of the technology that the podium is using like the projector lamp, audio, and DVD player so that it can be fixed and the data can be easily stored.

The student aspect of the form would be helpful so that IT workers can look at these forms and know what problems are going on with the podium and what would need to be fixed. This is just an easier way to go about fixing these issues for the school.
